

Campus Placement & Internship Guidelines

Sample document for testing the CloudDocs AI RAG application.

1. Placement Eligibility

Students applying for campus placement opportunities must have a minimum CGPA of 7.5 on a 10-point scale. Students must also have no active academic backlogs at the time of registration. Individual companies may specify additional eligibility requirements in their job descriptions.

Students are responsible for checking the eligibility criteria of each company before applying. Meeting the general college eligibility criteria does not guarantee eligibility for every company.

2. Placement Registration

Eligible students must register through the official placement portal before the registration deadline. The registration form should contain accurate academic information, contact details, and an updated resume.

Once a student registers for a company, they should regularly check official placement announcements for test schedules, interview timings, and additional instructions. Missing a mandatory assessment or interview may result in removal from that recruitment process.

3. Internship Eligibility

Students seeking internships should normally have completed at least four academic semesters. Internship eligibility may depend on the requirements specified by the organization offering the internship.

For internships that carry academic credit, students must complete the required documentation and obtain approval from the appropriate faculty or department coordinator before beginning the internship.

4. Selection Process

A typical recruitment process may include an aptitude assessment, a technical assessment, one or more technical interviews, and a human resources interview. The exact sequence and number of rounds can vary between companies.

Students should prepare using the skills mentioned in the job description. For software engineering roles, preparation may include programming, data structures, databases, object-oriented programming, operating systems, computer networks, and relevant development technologies.

5. General Conduct

Students participating in recruitment activities are expected to follow the instructions provided by the placement team and recruiting organization. Students should provide truthful information in resumes, applications, and interviews.

Any company-specific rules communicated during a recruitment process take precedence over these general guidelines for that particular recruitment process.
